

ACPA OFFERS NEW TECHNICAL BULLETIN ON DIAMOND GRINDING

The American Concrete Pavement Association has updated and revised its technical bulletin on Diamond Grinding. It is a joint publication of the ACPA and the International Grinding and Grooving Association and contains the most complete information available on diamond grinding technology and its applications. It covers everything from advantages of diamond grinding to pavement evaluation, plans and specifications, equipment, construction, and – most importantly – to performance. The new performance information has been taken from *The Longevity and Performance of Diamond-Ground Pavements* research report completed last year.

The publication also describes the appropriate use of diamond grinding as a stand-alone rehabilitation technique, as part of a comprehensive concrete pavement restoration program, and as a surface texturing/smoothing corrective procedure for concrete pavements. Excellent photos, drawings, charts, and tables accompany this 28-page technical publication.

To order the new technical bulletin on diamond grinding, call ACPA's Order Processing Department at 1-800-868-6733 or fax to 847-966-9666.
