IPRF PRODUCES VIDEO ON REPAIR OF UTW

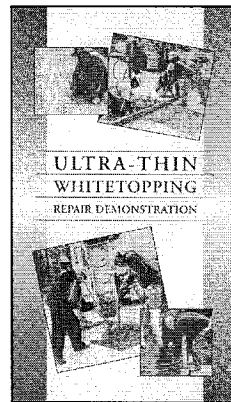

The Innovative Pavement Research Foundation has produced a new video entitled "Ultra-Thin Whitetopping Repair Demonstration." The 8-minute video highlights the repair demonstration of UTW pavements tested at FHWA's Accelerated Loading Facility in McLean, Virginia, performed as part of IPRF Task 7 – *Field Trials of Product & Process Technology*. The video was produced in cooperation with the Federal Highway Administration and Construction Technology Laboratories.

The introduction portion of the video includes a background and summary of ultra-thin whitetopping, as well as when UTW repairs are necessary. The step-by-step procedures used in the UTW repair process are simple and straightforward.

Copies of the video are available in VHS format from ACPA or IPRF. A PowerPoint slide presentation of the repair process has also been created, with an explanation for each slide included in the file. The full research report documenting the UTW repair project is available on IPRF's website, www.iprf.org, and the digital video, slide set, and report are all included on the IPRF *Research Reports & Findings* CD-ROM, available soon from IPRF or ACPA.

To order the "Ultra-Thin Whitetopping Repair Demonstration" video, call ACPA's Order Processing Department at 1-800-868-6733 or fax to 847-966-9666.
